

GRANT F. SHIMIZU D.D.S.

EXTRACTION

About the proposed treatment

An extraction involves removing one or more teeth. Depending on their condition. This may require cutting the tooth or gums removing bone. If any unexpected difficulties occur during treatment. I may send you to an oral surgeon, a dentist who specializes in extracting teeth and performing other surgical procedures.

Benefits and alternatives

The proposed treatment will help to relieve your symptoms and may also enable you to proceed with further proposed treatment. There is no reasonable alternative treatment that will relieve your symptoms.
